CHEMICAL AND CORROSION EXPOSURE TESTS
CHEMICAL RESISTANCE: Good to excellent resistance to most solvents, oils, acids, and alkalies.
OVERBAKE RESISTANCE: Slight yellowing is evident, especially in white and pastel colors.

APPLICATION
This product was designed to be applied by electrostatic spray, on steel, galvanized steel, or aluminum. Most powders can be reclaimed, sieved and recycled, if proper housekeeping is maintained.

PRETREATMENT
The substrate pretreatment prior to powder coating is a critical factor in developing maximum corrosion resistance and maximizing the lifetime of the product.

- C.R.S. (Iron phosphate): 2 to 5 stages depending upon soil level, and quality desired.
- C.R.S. (Zinc phosphate): 5 to 9 stages depending upon soil level, and quality desired.
- Galvanized steel (Zinc phosphate): 5 to 7 stages depending on soil level, and quality desired. Galvanized steel must be degassed at 5 degrees above cure temperature to minimize gasping.
- Aluminum (Chromate): 5 stage system is normally needed.
- Aluminum (phosphate): 5 stage system is normally needed.
