## CHEMICAL AND CORROSION EXPOSURE TESTS

- **CHEMICAL RESISTANCE:** Good to excellent resistance to most solvents, oils, acids, and alkalis.
- **OVERBAKE RESISTANCE:** Slight yellowing is evident, especially in white and pastel colors.

All tests were performed on 24 gauge Bonderite 1000 panels.

## APPLICATION

This product was designed to be applied by electrostatic spray, on steel, galvanized steel, or aluminum. Most powders can be reclaimed, sieved and recycled, if proper housekeeping is maintained.

## PRETREATMENT

The substrate pretreatment prior to powder coating is a critical factor in developing maximum corrosion resistance and maximizing the lifetime of the product.

- **C.R.S. (Iron phosphate):** 2 to 5 stages depending upon soil level, and quality desired.
- **C.R.S. (Zinc phosphate):** 5 to 9 stages depending upon soil level, and quality desired.
- **Galvanized steel (Zinc phosphate):** 5 to 7 stages depending on soil level, and quality desired. Galvanized steel must be degassed at 5 degrees above cure temperature to minimize gassing.
- **Aluminum (Chromate):** 5 stage system is normally needed.
- **Aluminum (phosphate):** 5 stage system is normally needed.
